waste Management

Waste Management is the Official Journal of IWWG (International Waste Working Group), a non-profit organisation founded by leading experts in the field of waste management and aimed to act as a think tank in the field, experiencing from the past, analysing the present and promoting views for the future.

Aims and Scope: *Waste Management* is an international journal devoted to the presentation and discussion of information on the generation, prevention, characterization, monitoring, treatment, handling, reuse and ultimate residual disposition of solid wastes, both in industrialized and in economically developing countries. The journal addresses various types of solid wastes including municipal (e.g., residential, institutional, commercial, light industrial), agricultural, and special (e.g., C&D, health care, household hazardous wastes, sewage sludge). *Waste Management* is designed for scientists, engineers, and managers, regardless of their discipline, who are involved in scientific, technical and other issues related to solid waste management. Emphasis is placed on integrated approaches. These approaches require the blending of technical and non-technical factors. Although the dissemination and application of innovative technical information is extremely important, the implementation of sustainable waste management practices also requires a thorough understanding of the pertinent legal, social, economic, and regulatory issues involved.
Papers should be submitted to the Managing Editor at the address above.
